

Route 299 Green Point Sink FACT SHEET

The Project

The Green Point Sink is a storm damage restoration project located about 14 miles east of the City of Blue Lake between post miles 21.0 and 21.1. The project will consist of the construction of two retaining walls and drainage improvements.

Benefits

Route 299 is an economic lifeline and an important route in Humboldt and neighboring counties. This project will improve safety by restoring the highway and minimizing traffic delays.

Project Status

An emergency repair project was recently implemented to help stabilize this location until a larger restoration project is awarded and in construction beginning in Fall 2012. The current emergency repairs will be incorporated into the larger restoration project to make the best use of State resources.

Project Costs

Approximately \$17 million

Project Schedule

Begin Construction: Fall 2012

Project Completion: Winter 2014
